DRDO CEMILAC

CENTRE FOR MILITARY AIRWORTHINESS & CERTIFICATION

SAMPLE PLACEHOLDER

August 2026

To whom it may concern,

This is a placeholder letter used to demonstrate how a recommendation appears on this site. It is not a real letter and carries no endorsement.

Ved joined the centre as a summer intern and worked on a two-dimensional incompressible flow solver written from first principles in MATLAB. He was methodical with verification, honest about the limits of the model, and quick to explain his results to people outside the project.

I recommend Ved without reservation for roles that ask for careful modelling, clear documentation and the willingness to build what has been designed.
